SHIFT HAPPENS!

COACH-REVIEW DRAFT v0.1

S04 | Hold the middle. Read the handoff. Contain.

Unity-first vertical slice • One controlled defenseman • 5 skaters + 1 goalie per team

Blue defends left. Y = controlled LD. Red RW carries behind the goal (amber). Blue RD returns to net front; Y then contains (blue dashed). All paths are proposals.

01 THE HOCKEY READ

Start: Red RW controls the corner puck. Blue RD contains goal-side; Y protects net front against Red C. Blue C supports inside near the dots. Strong-side RW holds the point lane; weak-side LW protects high slot. Red D remain outlets; Red LW stays a distinct inside/high threat.

Decision 1 - HOLD: As the carrier goes behind the goal, keep the dangerous net-front receiver covered while RD returns. Leaving early must open a plausible pass lane, not trigger an automatic goal.

Decision 2 - CONTAIN: Once RD actually covers the net-front threat, Y moves goal-side to deny the carrier's route to the net. C supports inside; wings exchange strong/weak jobs. Credit comes from Y's choice, not RD's automatic movement.

02 TEACHING LOOP

Proposed 45-60-second shift. Guided mode uses two brief decision stops with live movement between them. Freer mode has no prompts. Feedback shows the lane opened or protected; replay and retry use the same starting state.

Cue: "See your partner set. Then take away the lane to the net." Coverage is not a mandatory tie-up button or contact requirement.

03 BUILD & ACCEPTANCE GATES

Simulation: Reuse Unity movement/input and add the exchange as scenario data. Keep simulation, team roles, lesson triggers and presentation separate. Exactly 10 skaters + 2 goalies; at most one puck owner; no teleports at handoffs.

Behavior tests: Run hold/leave-early × contain/chase on both sides (8 cases). Confirm the exposed lane, preserved coverage and feedback match each case. No decision credit merely because a shot is saved.

Learning test: Award exchange credit only when both reads succeed in the same fresh, unassisted variant. Vary side, carrier timing, partner arrival and receiver movement. Preserve viable alternatives for coach review.

Controls: Verify pause/resume/retry preserves puck, player, timer and lesson state. Test outside-reach movement, not just a pre-positioned player. Keep goal, puck, partner, threat and controls visible on desktop and 390/320-px layouts; real-device testing is separate.

04 COACH APPROVAL BEFORE SCORING

David/Brian must approve positions, "partner set" criteria, containment region, reaction windows and accepted alternatives on both sides. These thresholds remain draft. Do not import aggressive pursuit, fixed distance rules or mandatory contact from other systems.

Basis: Box + 1 project reference, Nov 9: team rules govern scoring; Coach Russ video informs shape/movement (5:25-6:15 handoff). Current Unity scene is a usable starting point, not this completed lesson. No code changed.
